

430 Scuderia: Carrozzeria Scaglietti Program

In addition to the list of options that was previously provided regarding the 430 Scuderia, we would like to inform you of some additional options that will be available for the car.

Tachometer Color (Modis Code: INST)

As standard equipment, the choice of a red tachometer is available to the standard yellow.

Underdoor molding and wheel arch (Modis Code: BAT1, BATA, BATP)

This is to specify the material of the underdoor and wheel arch trim in the standard fabric, Alcantara, or leather.

Wheels in Gold color (Modis Code: RCGI)

The 430 scuderia wheels are available in a gold color, reminiscent of the historic F1 wheels. The standard wheel color is dark grey.

Carbon fiber exterior front (Modis Code: CEXF)

This option includes the front splitter, located between the two intake areas, and the surround material around the headlights.

This option reduces the weight of the car by over 3 lbs.

Carbon fiber underdoor cover (Modis Code: CEXS)

The exterior underdoor cover made of carbon fiber. It is painted in the same color as the body of the car.

This option reduces the weight of the car by almost 9 lbs.

Carbon fiber exterior rear (Modis Code: CEXR)

This option includes the rear hatch (entire engine cover piece) and the rear diffuser area.

The engine cover is done in fully in carbon fiber, with entire panel surrounding the engine glass, including the rear spoiler and third brake light. The rear panel is painted in body color. The hatch opening props are replaced by a locking bar.

The rear diffuser area is also made entirely of carbon fiber, including the six vertical vanes in the actual diffuser. This panel is not painted and the carbon fiber can be seen.

This option reduces the weight of the car by over 22 lbs.

Door sill cover in carbon fiber (Modis Code: BATC)

Upon demand, the door sill can be covered with a carbon fiber kick plate. There is a stainless steel trim piece at the front to protect the entry/exit area. This is compatible with the door sill and wheel arch options.

Driver's seat adjustment device (Modis Code: RSFT)

The seat can be equipped with a mechanical device to be used to adjust the height and tilt of the base cushion. The system works in a similar fashion to the system on the Challenge car in that there is an adjustment point at each corner of the seat. The height of the seat can be moved into one of four different positions. The basic position corresponds to the standard position of the seat. It can be moved upwards by a maximum of 40mm. To control the tilt, the front and rear clearance positions must be set to different levels, with a maximum of one position.

Since the seat must be removed in order to complete this operation, all adjustments must be completed at an Authorized Ferrari Workshop.

Specially designed luggage kit (Modis Code: BAGT)

A special luggage kit, consisting of a trolley and a soft bag, has been developed for the 430 Scuderia. It is designed to fit perfectly in the luggage compartment, in both the standard and the fully trimmed version. It will not fit in the luggage compartment if the optional mini-spare tire has been fitted.

The two pieces are produced in the same material of the car interior in the standard trim: black Alcantara, technical fabric, and 3D two-layer fabric. The two layer fabric and the stitching color match those of the car interior: Red, Yellow, Grey and Black.

Single luggage piece (Modis Code: BAGH)

The single trolley can be ordered separately from the soft bag. The luggage compartment cannot hold two trolleys at the same time.
